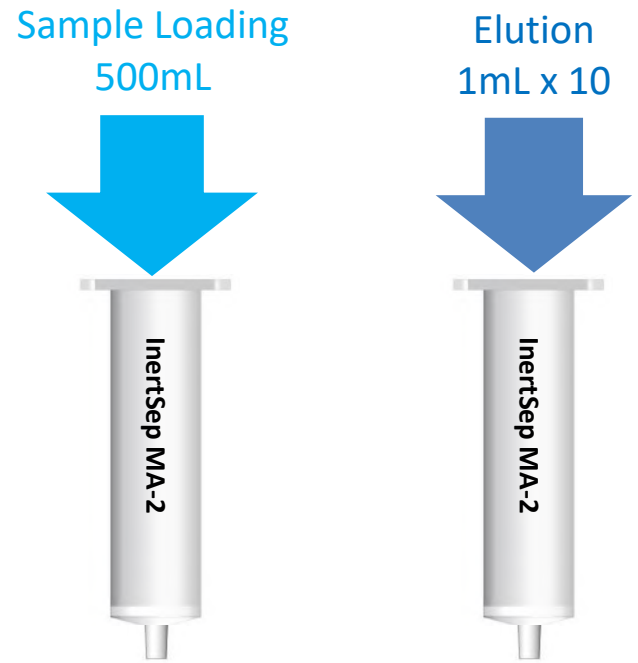
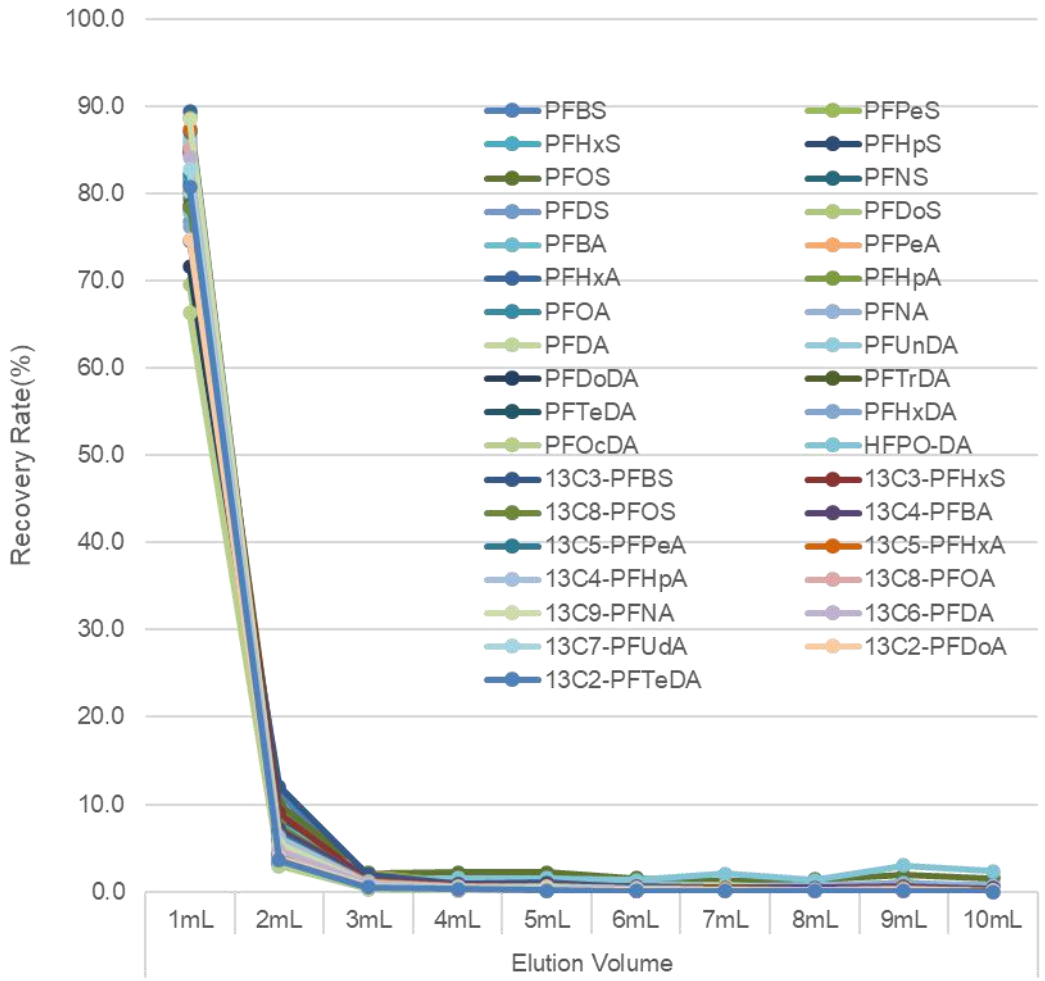
※MA-2 280mg

SPE Elution Profile

Elution profile of the MA-2 SPE cartridge. The sample is water containing the PFAS 21, and the recovery rate is shown for each of 1 mL elution volume. Because the InertSep MA -2 is a pure ion exchange mode with no reverse-phase behavior, you can easily and effectively elute even high carbon PFAS, such as PFOxDA(C18), with a small amount of solvent.





SPE Cartridge : InertSep MA-2 250mg
Solvent : 0.1% ammonium methanol
Elution Volume : 1mL x 10

SPE Procedure Comparison

Depending on the sensitivity and performance of LC/MS, your SPE method can be simplified by, for example, reducing the enrichment factor. Evaporation of the elution solvent is an effective way to save time and prevent contamination during the experiment. You can also scale down the amount of sample water, the size of the SPE cartridge, and the amount of the elution solvent.

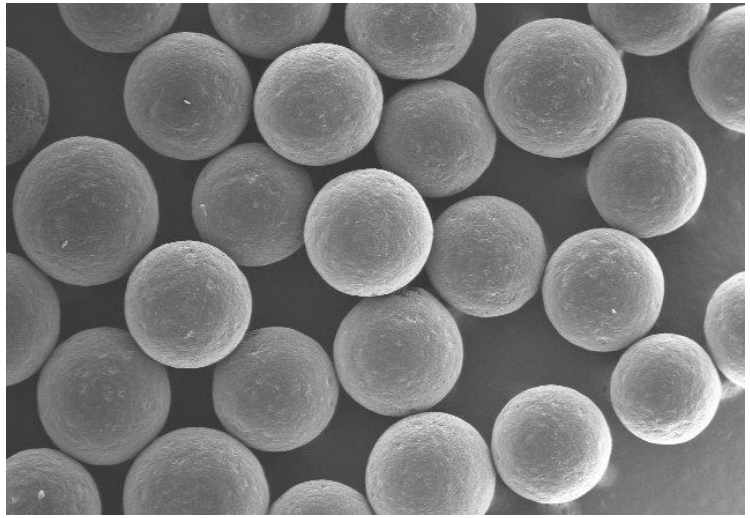
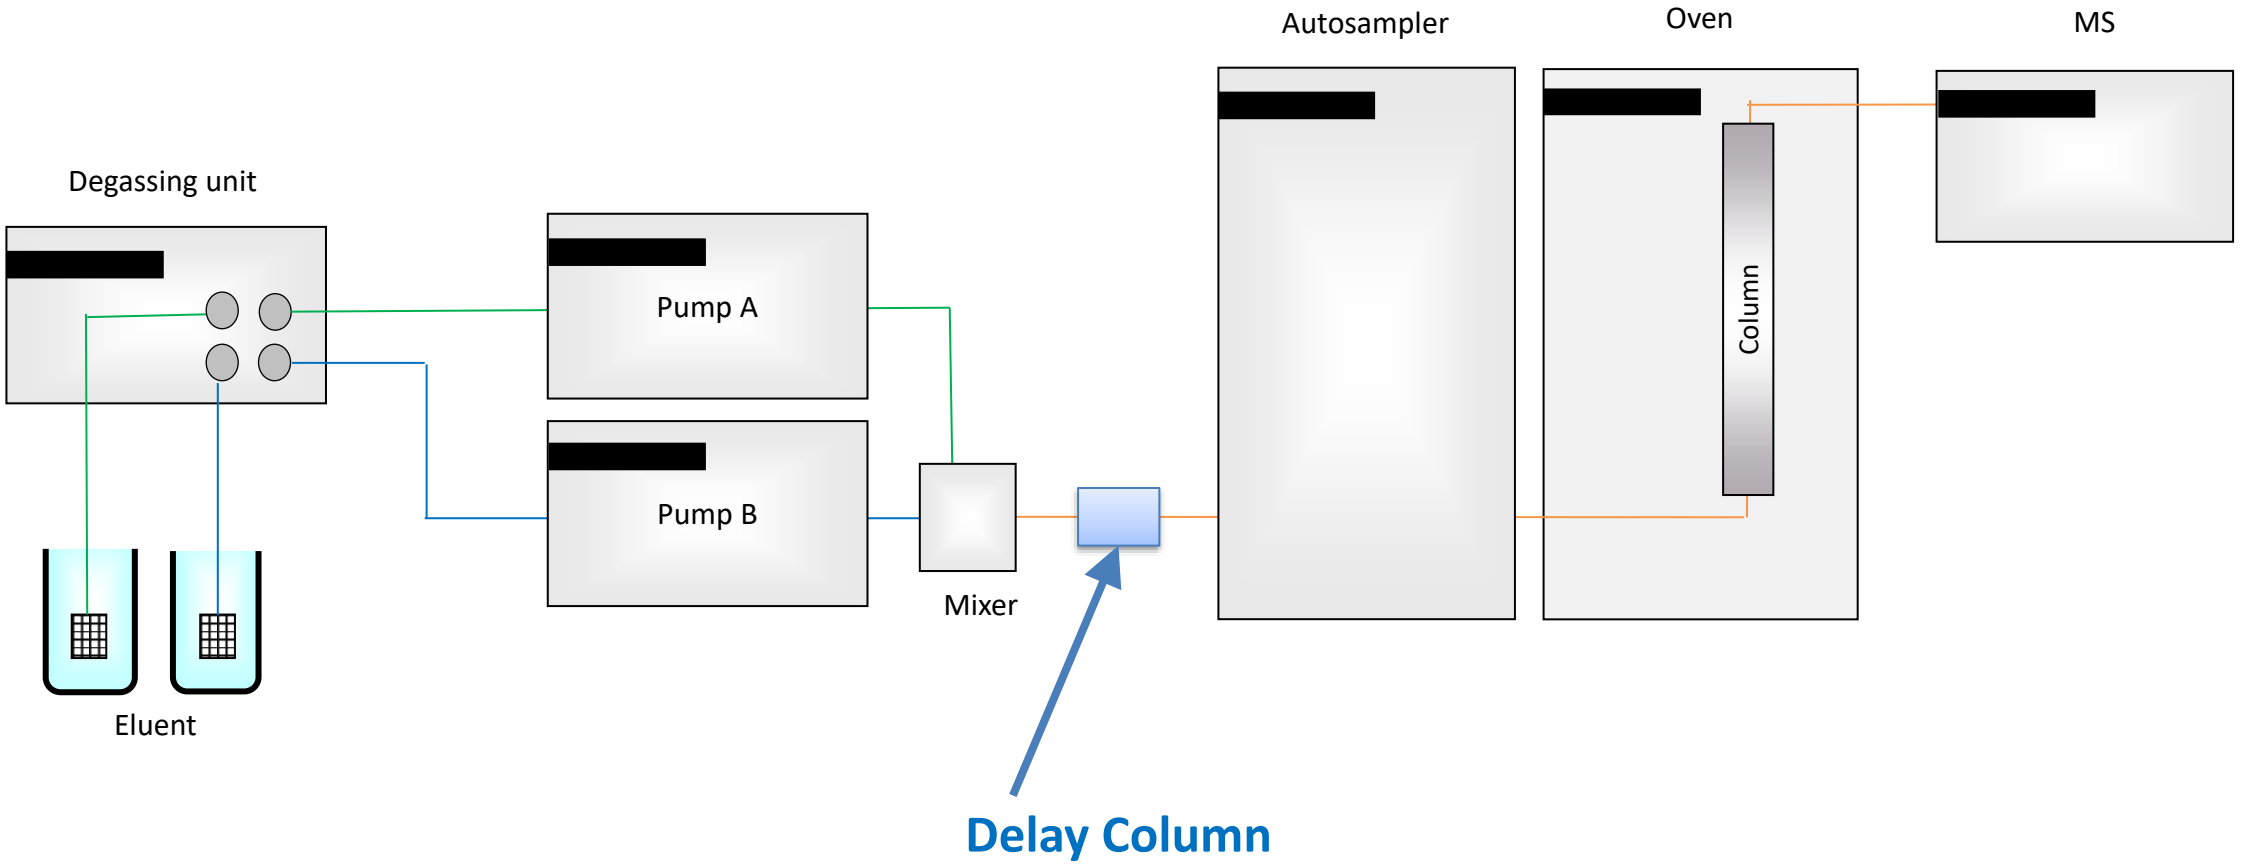
Delay Column

Delay Column for PFAS

- **Reduced LC-MS background**
- **Highly effective for PFAS Analysis**
- **Ultra high-purity activated carbon**
- **Low pressure**



Delay Column for PFAS Installation Position



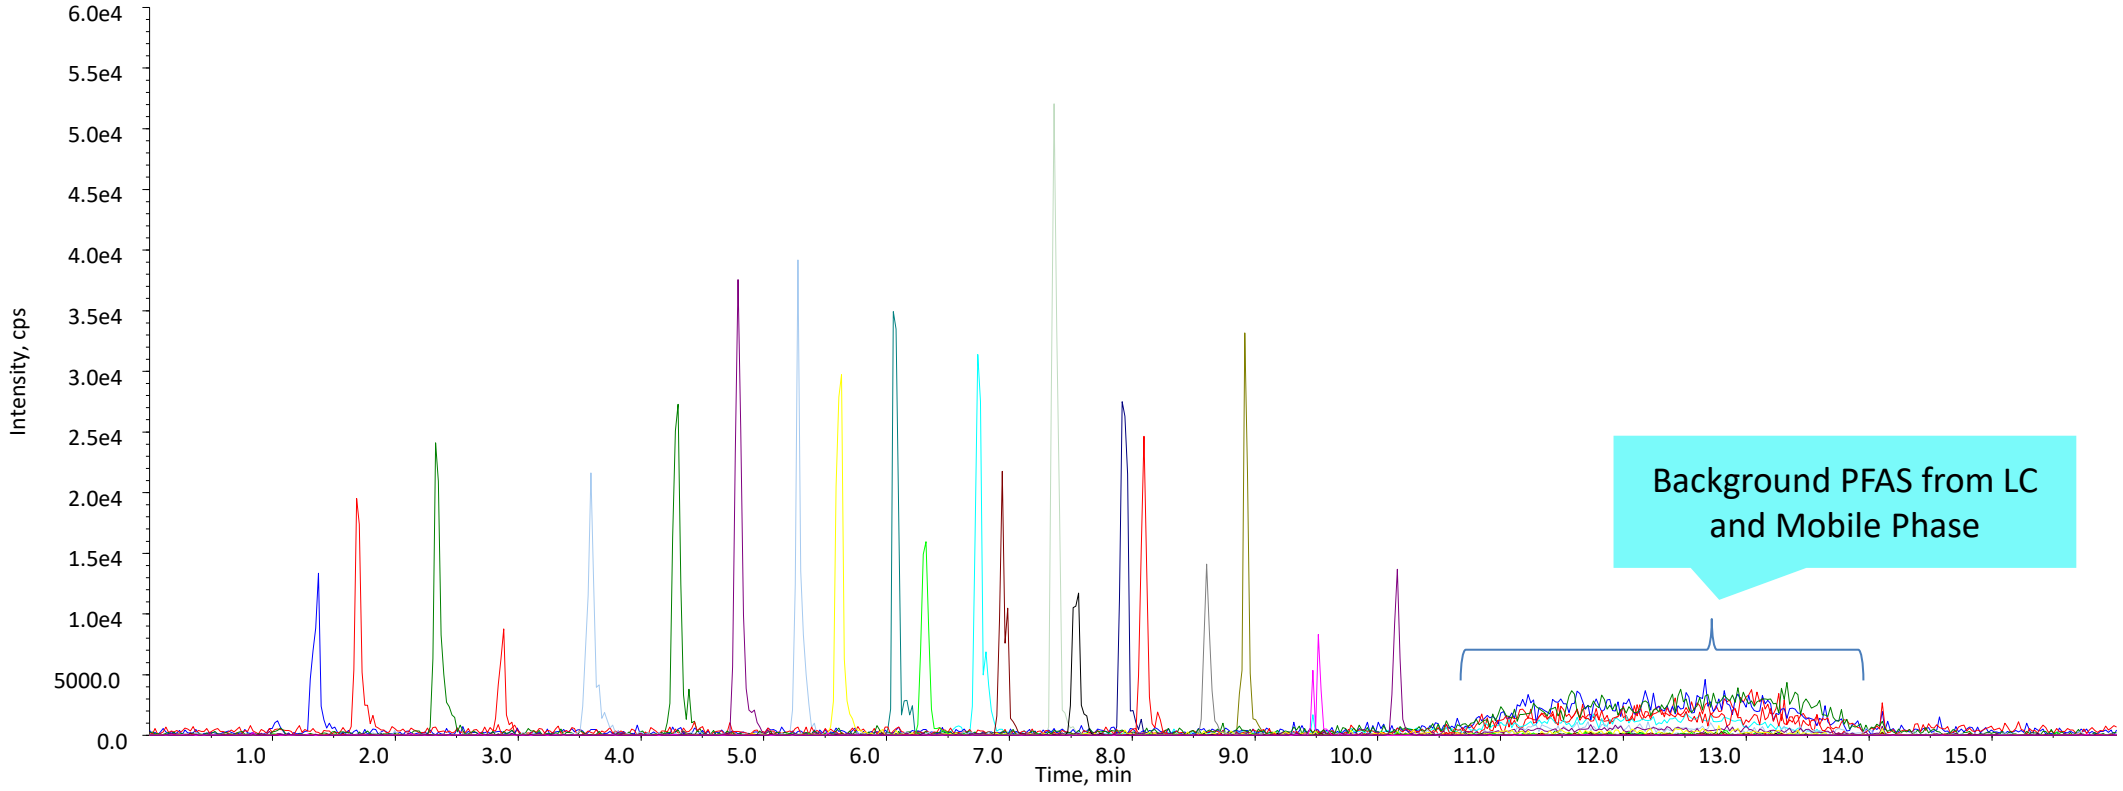
Chromatogram Using Delay Column for PFAS

The **Delay column for PFAS** is packed with high purity actived carbon beads, which strongly retain the background PFAS from the LC system and mobile phase. The retained PFAS compounds are eluted with 100% acetonitrile, allowing a greater separation from the analytes on the chromatogram.

Conditions

System	:	Nexera UFLC（Shimadzu）+ 4000 QTRAP(SCIEX)
Column	:	InertSustain C18 (3 µmHP, 150 x 2.1 mm I.D.)
Dellay Column	:	Delay column for PFAS (30 x 3.0 mm I.D.)
Eluent	:	A) 10 mM Ammonium acetate B) CH_3CN
Flow Rate	:	0.3 mL/min
Oven Temp.	:	40 ℃
Injection	:	1 µL

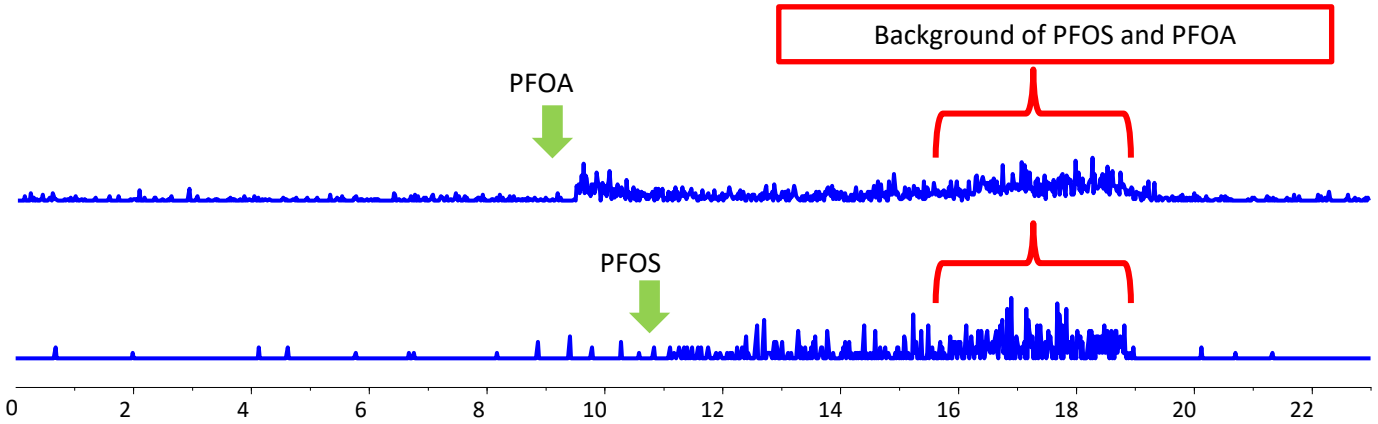
Time	A%	B%
0.0	60	40
1.5	60	40
10.0	0	100
12.0	0	100
12.1	60	40
16.0	60	40



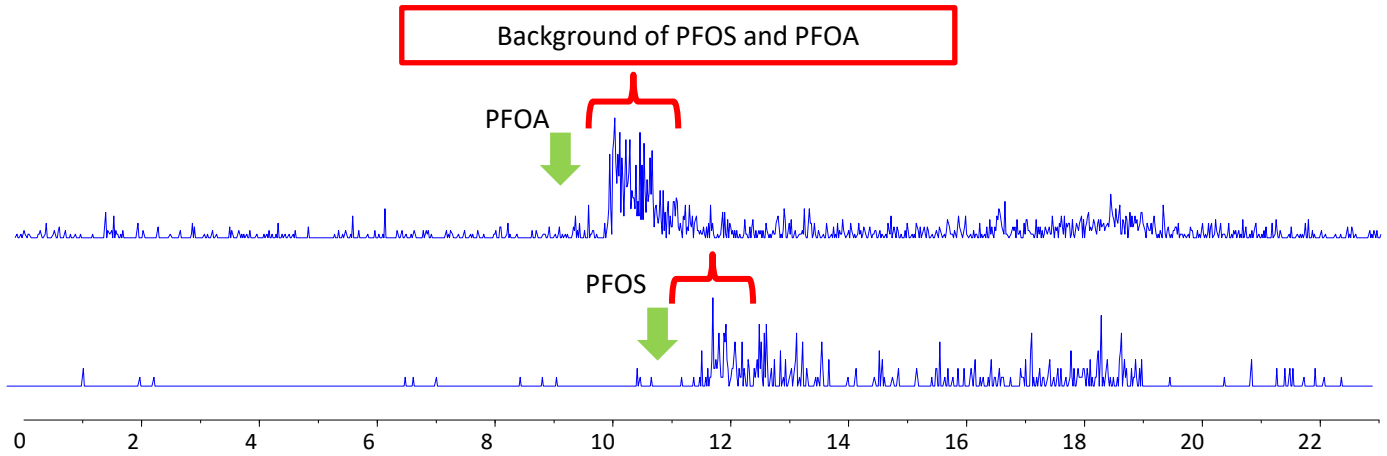
“Delay Column for PFAS" Effect

A comparison of the Delay column for PFAS with a general ODS column, which is commonly used as the Delay column. In contrast to the general ODS column that shows only a small delay and insufficient isolation, the Delay column for PFAS offers a better separation.

Delay Column For PFAS



General ODS column



Pressure Comparison

Delay Column	Analytical Column	System Pressure
None	InertSustain C18 (2.1 x 150 mm 3 µm-HP)	19.8 MPa
Delay Column for PFAS (3.0 x 30 mm)		19.8 MPa
General ODS column (2.1 x 50 mm 3 µm)		23 MPa

※System: LC(Nexera, Shimadzu), MS/MS(4000 QTRAP, SCIEX)

Delay Column for PFAS does not increase the LC system pressure
